PROJECTS

onDesk | *(JavaScript, React/Redux, Rails 5, Ruby, Heroku, DOM, AJAX, AWS3)*

[live](#) | [github](#)

- Employed drag & drop feature using React-Beautiful to reassign lists and papers for efficient project organization.
- Built a feature to share a desk with other users via a joint table leveraging active record associations.
- Applied DOM knowledge to manipulate CSS, resulting in a more dynamic user experience.
- Incorporated AWS S3 to store users profile pictures in the cloud to reduce load on the server.

Linkr | *(JavaScript, MongoDB, Mongoose, Express.js, React/Redux, Node.js)*

[live](#) | [github](#)

- Integrated Socket.io library granting real time messaging to users.
- Designed a “joint table” using mongoose, thus empowering MongoDB to its full potential since it is a non-relational database which demonstrated challenges for making an association and relation between users.
- Built custom routes using express.js to connect the backend to a frontend.

Space-Traveler | *(JavaScript, D3.js, DOM)*

[live](#) | [github](#)

- Leveraged use of a HTTP request to fetch and store data from NASA Archives, reducing the number of api calls made to the server which results in optimization and increased performance.
- Incorporated D3.js library to make data visualization highly interactive.
